JPA 2023-24 BUDGET OVERVIEW

In June 2022, the JPA Board adopted the Fiscal Year 2022-23 budget and approved the Fiscal Year 2023-24 budget plan. The purpose of preparing a two-year budget is to improve long-range and strategic planning, financial management, and program monitoring over a multi-year period. The Fiscal Year 2023-24 budget addendum provides estimated actuals for Fiscal Year 2022-23 and reflects any updates from the approved Fiscal Year 2023-24 approved budget plan.

The Fiscal Year 2023-24 JPA budget for operating expenses is \$24.4 million with net operating expense of \$21.6 million. Net Operating expenses increased from the budget plan by \$324 thousand as a result of increased Property and Earthquake Insurance premiums, offset by an increase in Wholesale RW Revenues.

Summary of Operational Changes Fiscal Year 2023-24

Wholesale Recycled Water Revenue	\$(24,000)
Property / Earthquake Insurance	<u>348,000</u>
Net Increase to Operating Expense	\$324,000

The JPA Capital Budget is \$41.3 million, which includes carryover amounts of \$13.9 million. This represents an increase of \$4.3 million in Fiscal Year 2023-24 over Fiscal Year 2022-23. Significant changes to the Capital Improvements Project Budget from the approved plan are detailed in the table below:

Summary of Significant Changes Capital Improvement Projects Fiscal Year 2023-24

	Budget Plan	Proposed	Adjustments
10702-Tapia Effluent Pump Station Rehab	5,522,500	3,626,370	(1,896,130)
10793-RW Pump Station Battery Energy Storage	1,381,950	-	(1,381,950)
10793-RW Pump Station Battery Storage Offset	(1,170,000)	-	1,170,000
10798-Centrifuge Rebuild	158,400	527,380	368,980
10801-Tapia Aluminum Sulfate Tank Rplcmnt	1,212,000	832,500	(379,500)
10803-Malibou Lake Siphon	1,337,000	3,002,000	1,665,000
NEW-Hach Equipment Replacement	-	150,000	150,000
NEW-RW Reservoir #2 Storm/Inflow Repairs	-	105,600	105,600
NEW-Tapia Flood Wall Improvements	-	198,000	198,000
	\$ 8,441,850	\$ 8,441,850	\$ -

Combined, the Operating and Capital budgets for Fiscal Year 2023-24 total \$65.7 million with Operating representing 37.17% and Capital representing 62.83% of that total.

GROUP

- A Basis of allocation to each participant is participant's reserve capacity rights in the trunk sewer.
- B Basis of allocation to each participant is participant's reserve capacity rights in the treatment plant and recycled water system.
- C Basis of allocation to each participant is participant's flow into the treatment plant.
- D Each participant is allocated an equal share.
- **E** Basis of allocation is each participant's average monthly cash balance.

Project Description: 2,460,913 2,500,000 39,087

This project replaces programmable logic controllers (PLC's) with newer PLCs and provides necessary equipment upgrades (fiber optics, network switches and programming) to complete the installation. This is a program project which addresses Tapia in the first two years and contrate treatment in the third year. Design will occur in the first year for all facilities

Summer Season TMDL Compliance-10619						
	Project Manager	Priority		Project to Date	Project to Date	
	Hurtado	2		Expenditures	Appropriations	Carryforward
Project Description:				3.768.849	4.597.941	829.092

In February 2017 the SWRCB adopted the implementation Plan for the 2013 TMDL. The plan provides for compliance with summer time limits within five years. The options for compliance include a "side stream" treatment plant, the use of potable water and nutrient trading in the watershed. This CIP funds the selection, preliminary studies, outreach, CEQA analysis, preliminary design, and final design for the summer time compliance. Project 10611 (Duct Bank Infrastructure Upgrade) was added to this program for the FY19-20 planning period. Construction of a 1 MGD "side stream" treatment facility at Tapia to treat potable water for stream flow augmentation.

Project Description:				6,814,179	12,473,632	5,659,453

The Pure Water Project relies on indirect potable reuse, a water supply strategy now adopted by many cities and water agencies in California and across the United States to provide local, reliable water. The ultimate, full-scale project will minimize the discharging of usable recycled water into Malibu Creek and instead will convert this resource into a viable source for potable, locally-produced water. The full-scale project involves the construction of several pipelines and an advanced treatment plant that will convert recycled water into pure drinking water. The Pure Water Project creates an affordable and reliable local water supply that will be cost-competitive with imported water, help stabilize water rates, safeguard the local economy, and significantly reduce the uncertainty of supply associated with importing water due to climate change and long-term and reoccurring drought conditions. The project will require public participation and acceptance, regional leadership, and funding to move from concept to reality.

Rancho Las Virgenes Storm Water Diversion-CIP10668					
	Project Manager Leu	Priority	Project to Date Expenditures	Project to Date Appropriations	Carryforward
Project Description:	Leu	2	3,746	3,746	-

Replacement of two storm water diversion structures at the Rancho Las Virgenes Composting Facility. Structures have lifted and need to be addressed. The drainage from the V-ditch goes to a discharge point in Las Virgenes Creek. There is a concern that sludge and/or reclaimed water entering into the V-ditch could enter the creek via the drainage from the V-ditch. An open/close valve should be installed at the drainage area so that operators control the contents of the V-ditch. A sump pump system with discharge piping should also be included so that the contents can be pumped either to the field or offsite.

Tertiary Filters concrete rehabilitation. Approximately 25 locations that require a 1 square foot patching with rebar repair. Replace 45 metal plates (2' X 4') on the filter deck and fix concrete around the plates with proper joint sealer. Also include the repair of an electrical panel in the Filter gallery. Replace existing electric actuators at filter structure with new electric actuators. Program plant control system to function with both remote PLC control of actuators and local actuator control. Upgrade local controls to replace old filter annunciator panels which are currently located on the top deck of the filter structure.

This project consists of the development of a preliminary design report to evaluate the storage and conveyance of Tapia primary effluent to help store and equalize the diurnal peak flows that Tapia sees between dry and wet weather events. This maximizes effluent available for the AWT and also improves and provides consistent water quality for the feed water to the AWT.
