## Wildlife in the Watershed

---

# Project Background

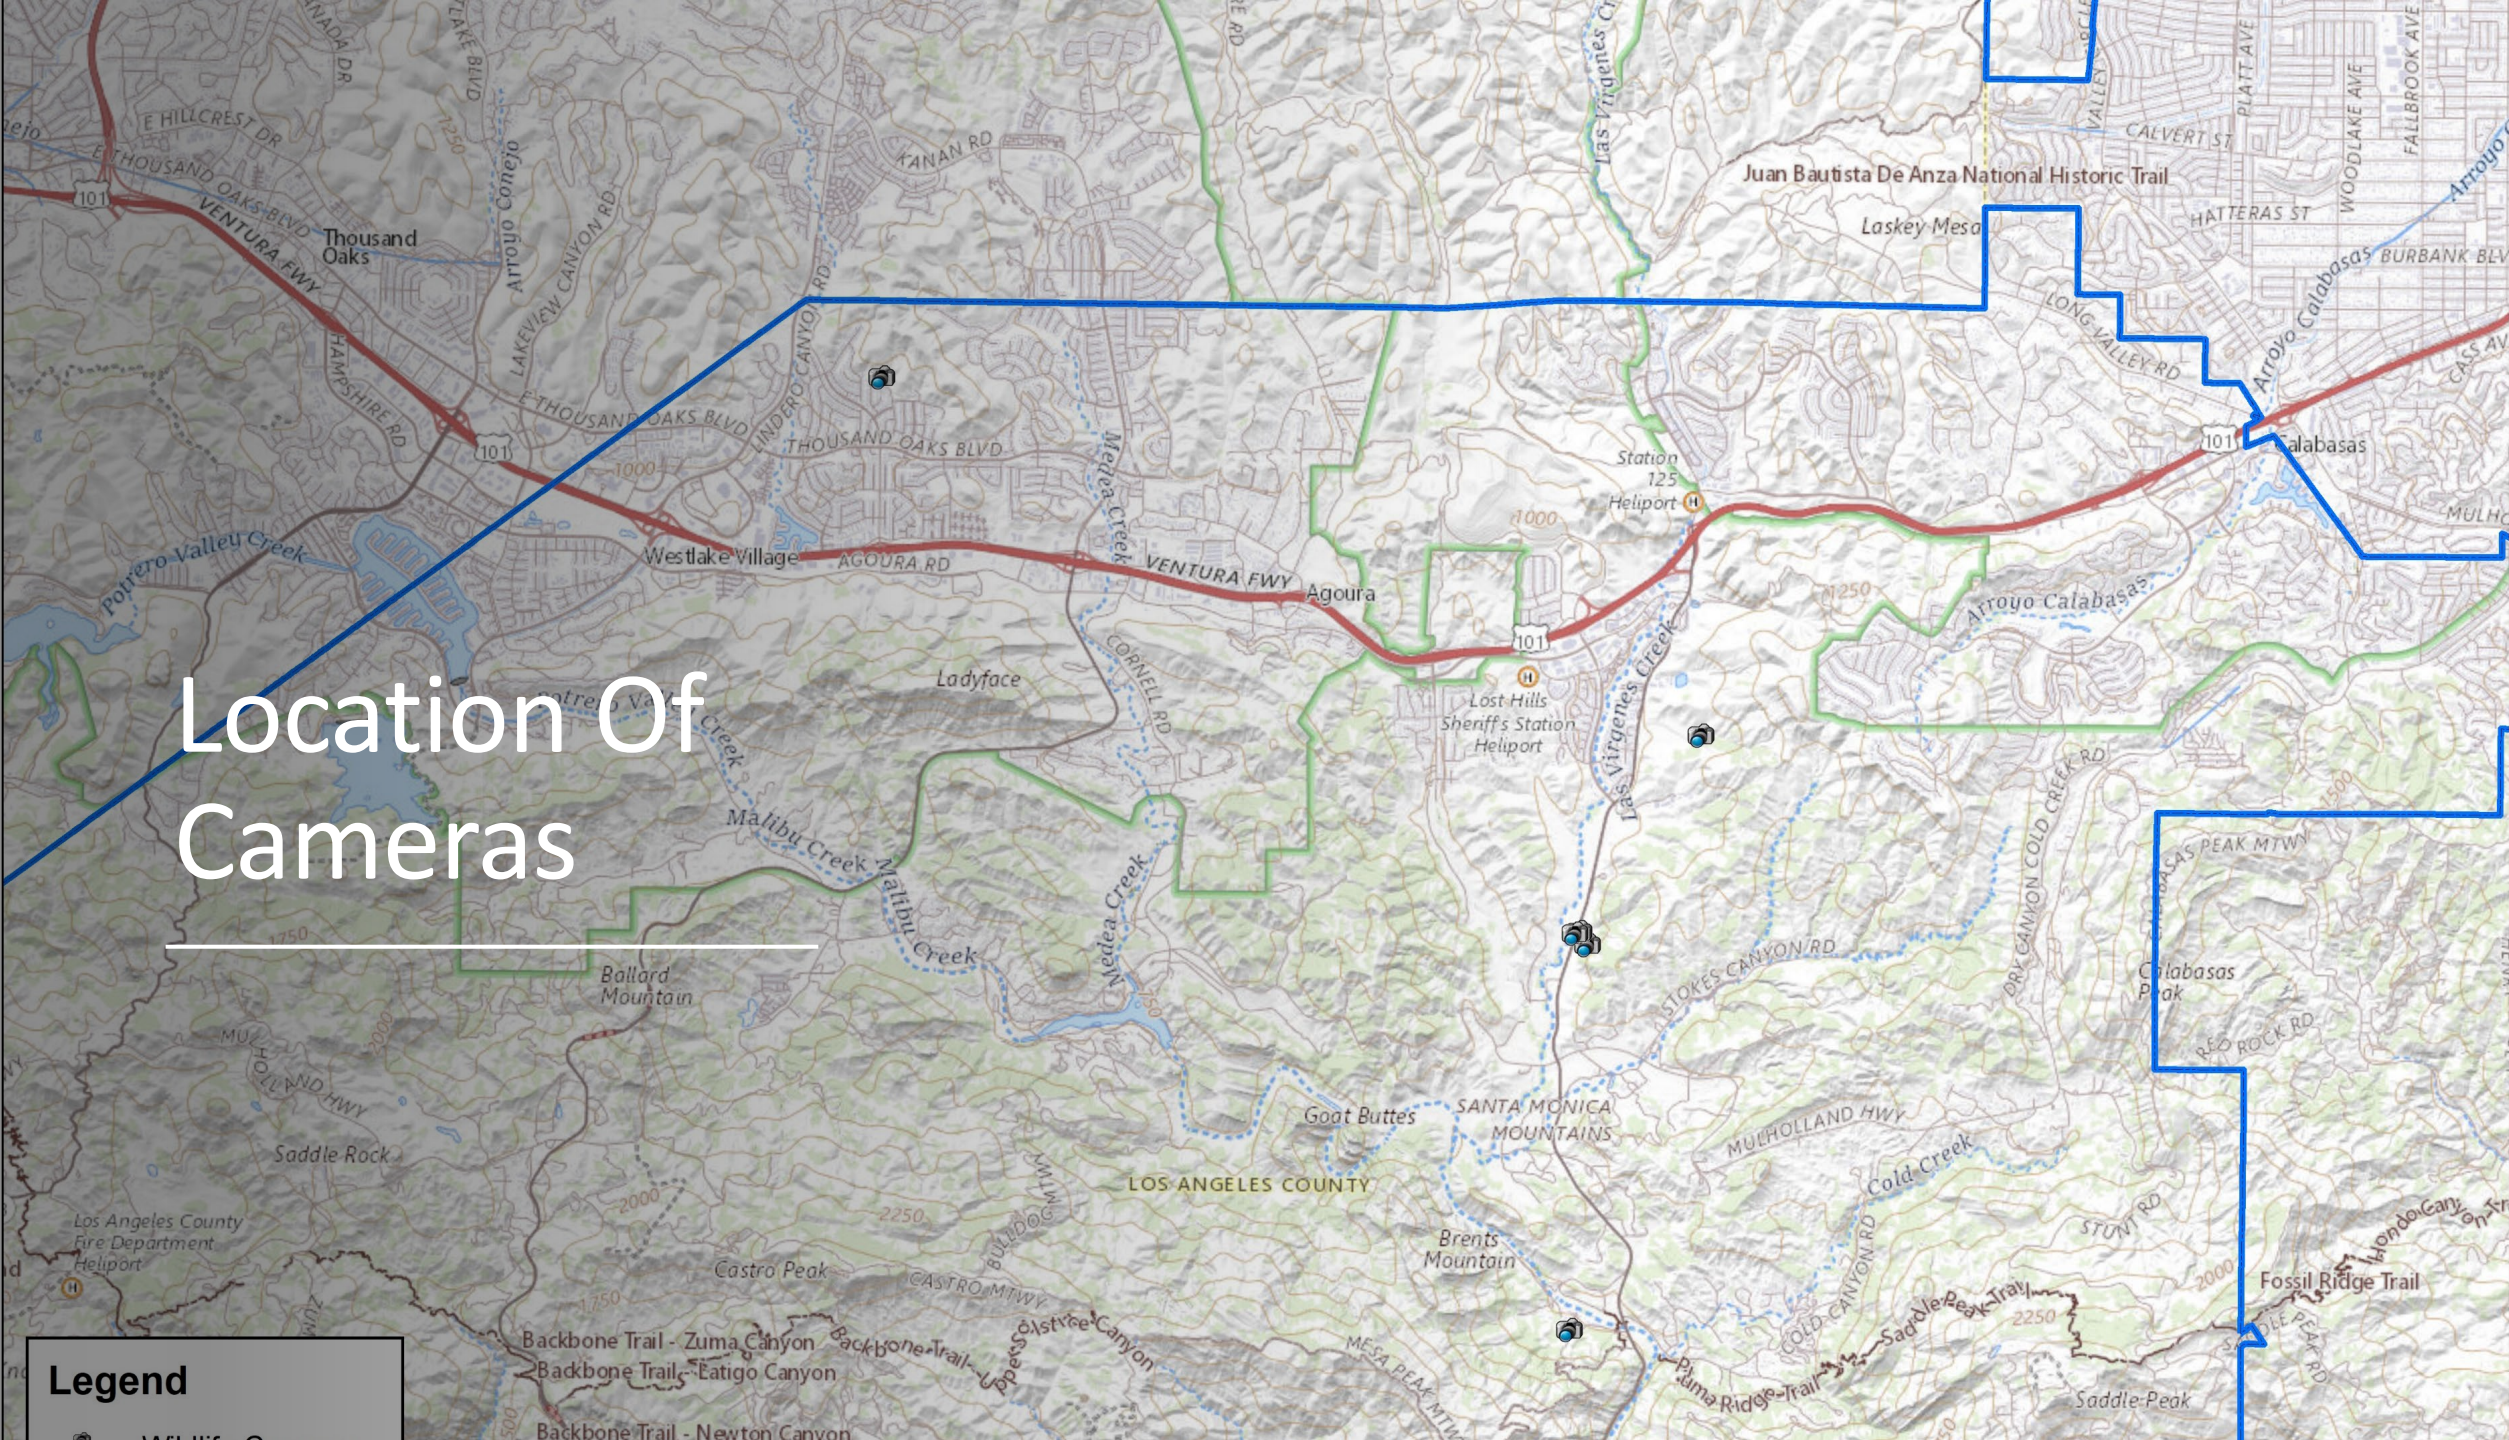

---

In June of last year, we provided a tour of our Pure Water Demonstration Facility to leadership staff at the National Wildlife Federation who are the leads on the construction of the Wallis Annenberg Wildlife Crossing.

Since the JPA owns and manages a large portion of property in close proximity (2 miles) to the future wildlife crossing, we discussed collaboration.

At no cost to the JPA, the National Wildlife Federation offered to install wildlife camera traps throughout the JPA properties to monitor wildlife movement.

# Spray Field Culvert-Coyote

A black and white night-vision photograph of a coyote standing in a culvert. The coyote is positioned on the left side of the frame, facing right. The culvert walls are made of rough, textured concrete or stone. The ground is dark and appears to be dirt or gravel. The overall scene is dimly lit, typical of a night-vision camera.
